SUMMARY

- 7+ years building backend-heavy systems across full-stack, cloud, and data engineering domains, collaborating remotely with European startup & mid-sized teams to deliver production platforms in green energy, recruitment, transportation, and high-traffic consumer products.
- Took high-impact ownership, such as reducing cloud usage costs by 75%, eliminating customer data security vulnerability in object storage, MPTT-based organizational unit service for RBAC, etc.
- Mentored 20+ junior engineers on AWS (15+ services), enabling effective contribution to their projects.

TECHNICAL SKILLS

- Language: Python, JavaScript, Typescript
- Framework: Django, Flask, FastAPI, Node.js
- Frontend: React, Next.js, Tailwind, HTML/CSS
- Database: Postgres, MySQL, DynamoDB, MongoDB, Redis, (SQL, NoSQL)
- Cloud: Google Cloud Platform (GCP), AWS (S3, Lambda, EC2, ECS, ECR, RDS, ALB, SQS, SNS, SES, IAM, VPC, Cloudfront, Cloudwatch, Route53)
- DevOps: Docker, GitHub Actions (CI/CD), Kubernetes, Prometheus, Grafana
- AI & LLM: GitHub Copilot, Claude Code, OpenAI, Agentic Development
- Others: Airflow, Celery, Git, Agile, Kafka, Pandas, Pytest (Unit test)

PROFESSIONAL EXPERIENCE

Senior Software Engineer, Cefalo | Dhaka, Bangladesh

April 2022 - Present

At Cefalo, part of a 200+ engineer offshore team for Norwegian industries, worked full-stack on a recruitment platform startup (1.5 years), then contributed to Volue Insight, a \$550M green energy market data & forecasting platform, in backend and data engineering roles (2.5 years).

Volue Insight

- Implemented and maintained 20+ Airflow DAGs orchestrating end-to-end data pipelines across multiple data sources, handling scheduling, retries, and dependency management.
- Built Python scripts to ingest, transform, and publish 500+ time-series curves for the internal team and external customers.
- Automated CI pipeline for trunk-based development, covering build, test, image publishing, deployment, and release notes that accelerated team velocity.
- Proactively resolve broken pipelines identified through SLO alerts and customer reports with root cause analysis and cross-team collaboration.

SmartCruiter

- 50% ownership of end-to-end design and development of the full-stack web app using Django, JavaScript, and AWS.
- Deployed multiple services to AWS ECS Fargate and ECR, eliminating server management overhead and enabling auto-scaling without provisioning EC2 instances.
- Designed a custom subscription system with a local mobile payment service, targeting 70% of potential subscriptions. Handled one-time and recurring subscriptions using proprietary APIs and scheduled jobs.

Software Engineer, Brainstation 23 Ltd | Dhaka, Bangladesh

January 2019 - March 2022

BS-23 serves global clients as a dev partner. Developed cloud-based backend for a trivia app for Robi, Bangladesh's 2nd largest telco, handling 5M+ requests/day. Backend engineer at Ferdia, a \$2.33M-funded Norwegian startup, building an ERP platform to digitize coach and charter bus operations.

- Resolved critical security vulnerabilities by securing exposed customer data in S3 buckets, along with minimising the negative user experience of accessing existing data.
- Optimised 75% of the monthly cloud infrastructure bill by improving APIs, database queries and adding caching mechanisms within a short timeframe. This swift action effectively resolved the client's budgetary concerns.
- Owned the organizational unit management service, solving complex hierarchical CRUD challenges with Modified Preorder Tree Traversal (MPTT), reducing query complexity from $O(N)$ to $O(1)$.
- Boosted average user engagement by 30% by introducing scalable friendship and chatting features with AWS API Gateway, Lambda, and DynamoDB.

EDUCATION

East West University, BSc in Computer Science & Engineering

December 2018

- Mentored 100+ university students in algorithms and data structures over multiple years
- Active competitive programmer: HackerRank (2237), CodeChef (2001), Codeforces (1554)
- 3rd place, City Inter-University Programming Contest 2017 (40 teams)
- 29th place, ACM ICPC Dhaka Regional 2017 (150 teams)

INDEPENDENT TECHNICAL R&D

[MenuDao](#) - Free SaaS platform for restaurant menu management, built while learning React, Next.js, MongoDB, and Tailwind; enables restaurants to create, manage, and share digital menus via QR codes

- Explored NextAuth authentication (Google OAuth + credentials) with JWT sessions and MongoDBAdapter; learned secure session callbacks and route protection in the App Router
- Practised SWR data fetching, learning optimistic UI updates, cache revalidation, and user-friendly error handling
- Integrated QR code generation into a real workflow, learning client-side rendering tradeoffs and Canvas-based generation

[Break The Ice With Python](#) - Open Source Learning Resource while learning Python & OOP

- Created an educational repository with 100+ Python programming problems and detailed solutions
- Achieved 3,100+ GitHub stars and 1,500+ forks, helping thousands of developers learn Python fundamentals

PROFESSIONAL CERTIFICATIONS

- [AWS Certified Solutions Architect\(Associate\)](#) - Amazon Web Services (AWS), Issued Feb 2020, Expired Feb 2023
- [PROFESSIONAL SCRUM MASTER™ I](#) - Scrum.org
